Garland, TX Leak Detection Supports Gas Line Safety

September 15, 2026

September 15, 2026 -
Gas leaks can develop without obvious damage, making timely detection an important part of maintaining a safe property. White Hat Plumbing provides Garland, TX leak detection and repair for homes and businesses in the Dallas-Fort Worth area, with Garland among the communities included in its service coverage. The company places particular attention on identifying warning signs and directing property owners toward appropriate professional and emergency resources when a gas leak is suspected.

Natural gas lines supply appliances such as stoves, water heaters, and furnaces, but cracks, damaged components, or loose fittings can allow gas to escape. The concern is not limited to a strong odor. Atmos Energy advises customers to use their senses to recognize possible leaks, including smelling the distinctive rotten-egg or skunk-like odor associated with odorized natural gas, listening for hissing or whistling near appliances or lines, and looking for blowing dust, bubbling water, or dead vegetation near a gas line.

Atmos Energy also provides specific instructions for suspected natural gas emergencies. Anyone who smells gas or believes a leak may be present should leave the affected area immediately and, from a safe distance, call 911 and Atmos Energy?s emergency line at 866-322-8667. The utility advises against trying to locate the source of a leak or using a mobile phone or anything that could create a spark while in the affected area. These steps take priority over arranging plumbing service because an active gas leak can present an

immediate safety hazard.

Once an area has been cleared and the utility or emergency response process has been addressed, qualified plumbing professionals can assist with gas-line problems that fall within their scope. White Hat Plumbing lists gas leak detection and repair among its plumbing services, alongside water and sewer leak detection, drain cleaning, water heater services, commercial plumbing, and trenchless pipe replacement. Its website states that gas leaks require immediate professional attention and that the company uses established methods to detect and repair them.

The company?s background also provides context for its approach to plumbing diagnostics. White Hat Plumbing states that its leadership has more than 35 years of combined master-level plumbing experience in the DFW area, while the company was established by professionals who had worked together for nearly two decades. The business also states that its technicians undergo yearly continuing education to maintain Texas licensure, in addition to being drug-tested and background-checked.

That local experience extends across a defined group of North Texas communities. White Hat Plumbing lists Garland, Wylie, Rockwall, Richardson, Plano, Terrell, Forney, Royse City, Mesquite, Dallas, Fate, Sachse, Murphy, Lucas, Fairview, and Allen among its service areas. The company serves both residential and commercial customers, giving property owners access to plumbing support for different types of buildings and systems.

For residents and businesses considering Garland, TX leak detection, recognizing the distinction between a suspected emergency and a plumbing service need is essential. A sulfur-like odor, unusual hissing sound, unexplained changes in gas usage, or vegetation damage near a gas line can warrant attention, but these signs should not be used to investigate an active leak independently. Professional evaluation is appropriate after immediate safety procedures have been followed.

White Hat Plumbing is a locally owned and operated Texas plumbing company serving residential and commercial customers throughout the Dallas-Fort Worth area. Its services include leak detection and repair, gas leak detection and repair, drain cleaning, water heaters, tankless systems, commercial plumbing, and trenchless pipe replacement. The company?s service model emphasizes clear communication, organized scheduling, and attention to property throughout each plumbing project from start to finish.
